

TUFF•**GLO**®

...it's **REALLY** Tough LIGHT!

Why Choose **TUFF**•**GLO**® LIGHT?

1. They're really tough!

The **TUFF**•**GLO**™ LED light is specifically designed and built with safety glass grade material to be super rugged and vandal resistant. A hit from a rock, a ball, or even a truck won't break this light. See the testing video's.

2. They are low profile.

The **TUFF**•**GLO**™ LED light is less than 1/2 of an inch thick! Perfect for places where space is a problem like an attic, basement, or crawl-space. We also have a low profile size K kit for mounting under a kitchen cabinet.

3. They last a long, long time.

The life of a **TUFF**•**GLO**™ LED light is 25,000 hours, minimum. That's over 11 YEARS at 6 hours per day. This is WAAAAAY better than the 1 year life of a regular light bulb, or the 2-3 year life of a fluorescent.

4. Low power = low operating cost.

Designed using the latest LED technology, the **TUFF**•**GLO**™ LED light only sips a few watts of power. Models of various brightness are available that draw between only 3 and 10 watts of power. The 10 watt **TUFF**•**GLO**™ LED light gives as much light as a 75 watt light bulb. This light will nearly pay for itself in just one year versus the 75 watt light bulb in energy savings alone.

5. Very low maintenance.

The long life of a **TUFF**•**GLO**™ LED light translates to really low maintenance. Instead of changing the bulb every year, you can go for more than 11 years! This is especially good for high up and hard to reach places.

6. Indoor or outdoor use.

Use the standard **TUFF**•**GLO**™ LED light product indoors and in dry locations. Use the weatherproof option (W suffix) for outdoor and damp locations.

7. Places to use **TUFF**•**GLO**™ LED light:

- Walkways, pathways.
- Workshops, barns, and garages.
- Basement, attic, crawlspace.
- Public spaces.
- Sporting venues and Transit Stations.
- Warehouse.
- Machine and equipment rooms.
- Under cabinet light.
- Accent lighting.
- Truck, trailer, camper, RV.
